

Track deliveries, improve productivity and lower costs.

The sophisticated proof-of-delivery (POD) system that leverages the power of smartphones with the convenience and cost-savings of the Cloud. Nothing makes it easier to reduce your delivery and customer service costs and grow your margins.

Ingenious, elegant and cost-effective.

JumpTrack is the smartphone-based proof-of-delivery system designed to drive costs out of your business and maximize your margins. JumpTrack uses inexpensive smartphones instead of expensive proof-of-delivery terminals and mobile computers.

JumpTrack makes it easy to track deliveries, improve the productivity of delivery fleets and reduce customer service costs. Customers simply sign with a fingertip. Signatures and delivery information are automatically uploaded to the JumpTech servers in the Cloud and then downloaded into your back-end systems.

JumpTrack even helps you to get paid faster by making proof-of-delivery information available to your customers' accounts payable departments. Now they know who received what and when.

It's in the Cloud: Get maximum flexibility and rapid deployment.

JumpTrack is a hosted Cloud-based system. JumpTech hosts the application, stores your data, takes care of all upgrades and uploads delivery information directly from smartphones at the point of delivery. You don't need to buy servers, and there's no special software for your IT staff to install or maintain. You simply get access to all your delivery information, hosted in our secure data center—24/7—from any Internet-connected device. And if you're a large organization with distribution center deliveries all around the country, you can look up any delivery information anywhere, anytime from any device with an Internet connection.

Features

- **Electronic signature capture:** Reduce customer service costs and get paid faster.
- **Return tracking:** Increase accuracy and accountability.
- **Powerful invoice search capabilities:** Be incredibly responsive.
- **Driver performance reporting:** Reduce your delivery costs.
- **Runs on iOS and Android smartphones and tablets.**

JumpTrack Features

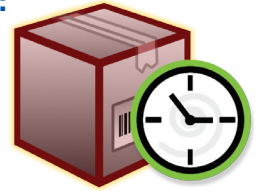

Electronic signature capture: Reduce customer service costs and get paid faster.

JumpTrack captures customer signatures on smartphones. If a customer has a question about when a delivery was made or who signed for it, your customer service reps can call up that information instantly, complete with signature, and email a copy to the customer. Your customers can even go to your website and find answers to delivery questions themselves. That reduces your customer service costs and expedites receipt of accounts receivables.

Driver performance reporting: Reduce your delivery costs.

JumpTrack tracks when drivers arrive at delivery stops and allows you to monitor driver performance and routes. That helps you make drivers more accountable and more productive. JumpTrack even makes it possible to use fewer drivers thus dramatically reducing your delivery costs.

This customer has returns.

OK

Return tracking: Increase accuracy and accountability.

Bedeveloped by questions about items that somehow manage

to get lost in your RMA processes? Since JumpTrack captures signatures when returned items are picked up at customer sites, you always know what return items were loaded on which trucks and keep your drivers accurate and accountable.

Smart use of smartphones: Do it all with one low-cost device.

Dedicated proof of delivery terminals and mobile computers cost thousands of dollars each. JumpTrack is the only proof-of-delivery solution that uses low-cost smartphones that your drivers are probably using already, so the cost of deployment is incredibly low. Communicate by voice with drivers and track all their delivery information in real-time with one easy-to-use, familiar device.

Powerful search capabilities: Be incredibly responsive.

Stop sending your customer service rep to the file cabinet to retrieve invoices to obtain proof of delivery information. JumpTrack allows customer service reps to look up proof-of-delivery information by invoice number, customer number, PO number, route and many other ways right from their PCs. Your customer service reps will be faster and more responsive than ever to customer inquiries.

Call us at 888-373-7226 for a complete JumpTrack demonstration. See for yourself how JumpTrack reduces your delivery and customer service costs and grows your margins.

System Requirements

iOS Device Requirements

A supported iPhone, iPod Touch or iPad with:

- iOS 3.0 or above
- JumpTrack subscription
